Phil Longman, an award-winning journalist and senior fellow at the New America Foundation, tells the compelling story of how the Veterans Administration, once notorious for dangerous, dirty and scandal-ridden hospitals, transformed itself into what is demonstrably the highest quality health care system in America. By making extensive use of electronic medical records and evidence-based medicine the VA has developed a model of 21st century health care that boosts safety, cost effectiveness, and patient satisfaction, and provides deep lessons for overhauling the U.S. health care system. Drawing on real world examples and the latest scientific research, *Best Care Anywhere*—now in its second edition—is particularly with the passage of health care reform in America, offering readers powerful new ways of thinking about health care. “Among the most important social policy books published in the last decade.”

—Ezra Klein, *The Washington Post*

The inside story of the laptop that exposed the president's dirtiest secret. When a drug-addled Hunter Biden abandoned his waterlogged computer at a Mac repair shop in Delaware in the spring of 2019, just six days before his father announced his candidacy for the United States presidency, it became the ticking time bomb in the shadows of Joe Biden's campaign. The dirty secrets contained in Hunter's laptop almost derailed his father's presidential campaign and ignited one of the greatest media coverups in American history. This is the unvarnished story of what's really inside the laptop and what China knows about the Bidens, by the New York Post journalist who brought it into the open. It exposes the coordinated censorship operation by Big Tech, the media establishment, and former intelligence operatives to stifle the New York Post's coverage, in a chilling exercise of raw political power three weeks before the 2020 election. A treasure trove of corporate documents, emails, text messages, photographs, and voice recordings, spanning a decade, the laptop provided the first evidence that President Joe Biden was involved in his son's ventures in China, Ukraine, and beyond, despite his repeated denials. This intimate insight into Hunter's dissolute lifestyle shows he was incapable of holding down a job, let alone being paid tens of millions of dollars in high-powered international business deals by foreign interests, unless he had something else of value to sell—which of course he did. He was the son of the vice president who would go on to become the leader of the free world.

Why VA Health Care Is Better Than Yours

US military conflicts abroad have left nine million Americans dependent on the Veterans Health Administration (VHA) for medical care. Their "wounds of war" are treated by the largest hospital system in the country—one that has come under fire from critics in the White House, on Capitol Hill, and in the nation's media. The resulting public debate about the future of veterans' health care has pitted VHA patients and their care-givers against politicians and policy-makers who believe that former military personnel would be better served by private health care providers. This high stakes controversy led Suzanne Gordon, award-winning health care journalist and author, to seek insight from veterans and their families, VHA staff and administrators, advocates for veterans, and proponents of privatization. Gordon spent five years closely observing the VHA's treatment of patients suffering from service related injuries, physical and mental. In *Wounds of War*, Gordon describes how the VHA-tasks with a challenging patient population- does a better job than private sector institutions offering primary and geriatric care, mental health and home care services, and support for

patients nearing the end of life. The VHA, Gordon argues, is an integrated health care system worthy of wider emulation, rather than piece-meal dismantling for the benefit of private contractors. In the unusual culture of solidarity between patients and providers that the VHA has fostered, the author finds a working model for higher quality health care and a much-needed alternative to the practice of for-profit medicine.

As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. Retooling for an Aging America calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use *Retooling for an Aging America* to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.

Draws on the examples of the Veterans Health Administration to present a model for socialized medicine in America, explaining how its system is setting standards for best practices and cost reduction that significantly outperform the private sector. Original. \$25,000 ad/promo.

*The Future of Nursing* explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Phillip Longman tells the amazing story of the turnaround of the Department of Veterans Affairs health-care system from a dysfunctional, scandal-prone bureaucracy into the benchmark for high-quality medicine in the United States. *Best Care Anywhere* shows that vast swaths of what we think we know about health, health care, and medical economics are just plain wrong. And the book demonstrates how this extraordinarily cost-effective model, which has proven to be highly popular with veterans, can be made available to everyone. New to this edition is an analysis of how the shortcomings of both so-called Obamacare and Republican plans to privatize Medicare reinforce the need for applying the lessons of the VA. Also included are completely updated statistics and research, as well as examples of how the private sector is already beginning to learn from the VA's example.

In *The Battle for Veterans' Healthcare*, award-winning author Suzanne Gordon takes us to the front lines of federal policymaking and healthcare delivery, as it affects eight million Americans whose military service makes them eligible for Veterans Health Administration (VHA) coverage. Gordon's collected dispatches provide insight and information too often missing from mainstream media reporting on the VHA and from Capitol Hill debates about its future. Drawing on interviews with veterans and their families, VHA staff and administrators, health care policy experts and Congressional decision makers, Gordon describes a federal agency under siege that nevertheless accomplishes its difficult mission of serving men and women injured, in myriad ways, while on active duty. *The Battle for Veterans' Healthcare* is an essential primer on VHA care and a call to action by veterans, their advocacy organizations, and political allies. Without lobbying efforts and broader public understanding of what's at stake, a system now functioning far better than most private hospital systems may end up looking more like them, to the detriment of patients and providers alike.

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

There have always been homeless people in the United States, but their plight has only recently stirred widespread public reaction and concern. Part of this new recognition stems from the problem's prevalence: the number of homeless individuals, while hard to pin down exactly, is rising. In light of this, Congress asked the Institute of Medicine to find out whether existing health care programs were ignoring the homeless or delivering care to them inefficiently. This book is the report prepared by a committee of experts who examined these problems through visits to city slums and impoverished rural areas, and through an analysis of papers written by leading scholars in the field.

A heartbreaking and powerful story about a black boy killed by a police officer, drawing connections through history, from award-winning author Jewell Parker Rhodes. Only the living can make the world better. Live and make it better. Twelve-year-old Jerome is shot by a police officer who mistakes his toy gun for a real threat. As a ghost, he observes the devastation that's been unleashed on his family and community in the wake of what they see as an unjust and brutal killing. Soon Jerome meets another ghost: Emmett Till, a boy from a very different time but similar circumstances. Emmett helps Jerome process what has happened, on a journey towards recognizing how historical racism may have led to the events that ended his life. Jerome also meets Sarah, the daughter of the police officer, who grapples with her father's actions. Once again Jewell Parker Rhodes deftly weaves historical and socio-political layers into a gripping and poignant story about how children and families face the complexities of today's world, and how one boy grows to understand American blackness in the aftermath of his own death.

Examining the many obstacles to faith and what can be done to overcome those hurdles, he emphasizes the importance of service to God and all his creation. The former VA secretary describes his fight to save veteran health care from partisan politics and how his efforts were ultimately derailed by a small group of unelected officials appointed by the Trump White House. Known in health care circles for his ability to turn around ailing hospitals, Dr. David Shulkin was originally brought into government by President Obama to save the beleaguered Department of Veterans Affairs. When President Trump appointed him as secretary of the VA, Shulkin was as shocked as anyone. Yet this surprise was trivial compared to what Shulkin encountered as secretary: a team of political appointees devoted to stopping anyone -- including the secretary himself -- who stood in the way of privatizing the agency and implementing their political agenda. In this uninhibited memoir, Shulkin opens up about why the government has long struggled to provide good medical care to military veterans and the plan he had to solve these problems. This is a book about the commitment we make to the men and women who risk their lives fighting for our country, how the VA was finally beginning to live up to it, and why the new administration may now be taking us in the wrong direction.

In the spirit of Gretchen Rubin's megaseller *The Happiness Project* and Eric Weiner's *The Geography of Bliss*, a journalist embarks on a project to discover what it takes to love where you live The average restless American will move 11.7 times in a lifetime. For Melody Warnick, it was move #6, from Austin, Texas, to Blacksburg, Virginia, that threatened to unhinge her. In the lonely aftermath of unpacking, she wondered: Aren't we supposed to put down roots at some point? How does the place we live become the place we want to stay? This time, she had an epiphany. Rather than hold her breath and hope this new town would be her family's perfect fit, she would figure out how to fall in love with it—no matter what. How we come to feel at home in our towns and cities is what Warnick sets out to discover in *This Is Where You Belong*. She dives into the body of research around place attachment—the deep sense of connection that binds some of us to our cities and increases our physical and emotional well-being—then travels to towns across America to see it in action. Inspired by a growing movement of placemaking, she examines what its practitioners are doing to create likeable locales. She also speaks with frequent movers and loyal stayers around the country to learn what draws highly mobile Americans to a new city, and what makes us stay. The best ideas she imports to her adopted hometown of Blacksburg for a series of *Love Where You Live* experiments designed to make her feel more locally connected. Dining with her neighbors. Shopping Small Business Saturday. Marching in the town Christmas parade. Can these efforts make a halfhearted resident happier? Will Blacksburg be the place she finally stays? What Warnick learns will inspire you to embrace your own community—and perhaps discover that the place where you live right now . . . is home.

A heartbreaking and hilarious memoir by iCarly and Sam & Cat star Jennette McCurdy about her struggles as a former child actor—including eating disorders, addiction, and a complicated relationship with her overbearing mother—and how she retook control of her life. Jennette McCurdy was six years old when she had her first acting audition. Her mother's dream was for her only daughter to become a star, and Jennette would do anything to make her mother happy. So she went along with what Mom called "calorie restriction," eating little and weighing herself five times a day. She endured extensive at-home makeovers while Mom chided, "Your eyelashes are invisible, okay? You think Dakota Fanning doesn't tint hers?" She was even showered by Mom until age sixteen while sharing her diaries, email, and all her income. In I'm Glad My Mom Died, Jennette recounts all this in unflinching detail—just as she chronicles what happens when the dream finally comes true. Cast in a new Nickelodeon series called iCarly, she is thrust into fame. Though Mom is ecstatic, emailing fan club moderators and getting on a first-name basis with the paparazzi ("Hi Gale!"), Jennette is riddled with anxiety, shame, and self-loathing, which manifest into eating disorders, addiction, and a series of unhealthy relationships. These issues only get worse when, soon after taking the lead in the iCarly spinoff Sam & Cat alongside Ariana Grande, her mother dies of cancer. Finally, after discovering therapy and quitting acting, Jennette embarks on recovery and decides for the first time in her life what she really wants. Told with refreshing candor and dark humor, I'm Glad My Mom Died is an inspiring story of resilience, independence, and the joy of shampooing your own hair.

The Veterans Healthcare System: a Microcosm of the Current Federal Government

Wounds of War

For her two-plus decades as a hospice nurse at the Department of Veterans Affairs, Deborah Grassman has often heard the comment, Isn't your work depressing? Like many others, she had begun her hospice career with that same prejudice. She feared death itself, and because of that fear, she was unaware that she could find peace, joy, and fulfillment in caring for people at the end of their lives. She had no special training in caring for veterans, and she had no reason to think that veterans needs were any different from nonveterans. With time and experience, however, she began to realize that these veterans had experiences and training that made them different from other hospice patients. Likewise she began to understand that she could learn lessons about peace from people who were trained for war; that warriors often have wisdom that, paradoxically, shows us how to live in peace with each other and within ourselves. In Peace at Last, Deborah Grassman takes the reader on a journey of understanding and growth. While caring for thousands of veterans in a hospice setting over a 25-year career in a VA hospital, she gathered the veterans stories of pain and redemption, personal awakening, and peace. Then she crafted these stories into an unforgettable book. Designed to help caregivers, family members, and veterans themselves understand the impact of war and military culture on lives and emotions, Peace at Last contains veterans stories, hospice experiences, and a series of appendices providing sample materials that can assist with healing.

President Lincoln in 1865 said: To care for him who shall have borne the battle and for his widow and his orphan. This quote was later adapted as the VAs motto. General Omar N Bradley's VA Mission Statement We are dealing with veterans, not procedures— with their problems, not ours has been quoted repeatedly during the seventy five years since. In 1982 President Reagan approved \$55.6 million in financial aid to Meharry Medical College. An acute care facility was established at Murfreesboro VA for training Meharry students. Bob Stump [Rep, Arizona], the chairman of the House Committee on Veterans Affairs, recently heard that, in some VAs, incompetent managers are not fired on the spot, but instead, reassigned or transferred. The fix was the immediate removal of Konik as the failed director at the Salisbury VA and recycling him as our new director in the summer of 1996. . On Tuesday April 14th, 1998, an E-Mail was disseminated with following quotation: Weak leadership at the York VA Medical Center has prompted changes in the hospitals administration staff, with hospital Director Gene Konik reportedly asking for reassignment, VA officials said. Mr. Dandridge began to initiate his long-term plan for integrating Murfreesboro and Nashville VA. One of his famous quotations was: Practice, practice makes perfect. Another of his public quotations was: Having the Nashville VA surgical residents perform the surgery would provide world-class surgery to the area veterans. . In the last five years, York has seen four different directors. Gordons office has been bombarded with complaints from ailing veterans and their families about lack luster care. Those who have died as a result of the administrative and service changes can't complain anymore. Current York VA Director David Pennington has never spoken to the press about anything, but did send a memo to the medical staff warning them to get online or get out! Our last crop of veterans is dying because of VA medical mismanagement, and our next batch is being loaded onto airplanes to fly back to an uncertain future. Mr. Sullivan, a Gulf War I vet and VA project manager stated: This administration is so absolutely corrupt, incompetent and malevolent; it pales anything that came before it. Why is our economy tanking? The war, the war, the war.

Building the Health Care Workforce

Over Our Heads, a new book by Rulon Stacey, points to good intentions and government interference. Costs continue to soar, and Americans already crippled by a sluggish economy struggle to pay escalating insurance premiums. Politicians, entertainers, and other public figures regularly demonize healthcare professionals as the ones who created this situation through either greed or mismanagement. Meanwhile, it seems as though government "solutions" just make things worse, and the problems keep piling up. This book will be welcomed by healthcare professionals searching for a way to tell their story, political reformers building a case for change, students seeking a defined case study on the healthcare cost crisis, and citizens seeking insights on how we got so far in "over our heads"—and where we're likely to end up.

Dave Ramsey explains those scriptural guidelines for handling money.

Approximately 4 million U.S. service members took part in the wars in Afghanistan and Iraq. Shortly after troops started returning from their deployments, some active-duty service members and veterans began experiencing mental health problems. Given the stressors associated with war, it is not surprising that some service members developed such mental health conditions as posttraumatic stress disorder, depression, and substance use disorder. Subsequent epidemiologic studies conducted on military and veteran populations that served in the operations in Afghanistan and Iraq provided scientific evidence that those who fought were in fact being diagnosed with mental illnesses and experiencing mental health-related outcomes—in particular, suicide—at a higher rate than the general population. This report provides a comprehensive assessment of the quality, capacity, and access to mental health care services for veterans who served in the Armed Forces in Operation Enduring Freedom/Operation Iraqi Freedom/Operation New Dawn. It includes an analysis of not only the quality and capacity of mental health care services within the Department of Veterans Affairs, but also barriers faced by patients in utilizing those services.

Offers techniques and strategies for increasing income while cutting work time in half, and includes advice for leading a more fulfilling life.

Veterans are among our greatest heroes. After willingly putting their lives on the line, they have been promised access to at least the same quality healthcare of most Americans. The US Department of Veterans Affairs is charged with fulfilling that promise.
