

Biosaline Agriculture And High Salinity Tolerance

When people should go to the books stores, search commencement by shop, shelf by shelf, it is in fact problematic. This is why we offer the books compilations in this website. It will agreed ease you to see guide **Biosaline Agriculture And High Salinity Tolerance** as you such as.

By searching the title, publisher, or authors of guide you in reality want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be all best place within net connections. If you seek to download and install the Biosaline Agriculture And High Salinity Tolerance, it is completely simple then, back currently we extend the associate to buy and create bargains to download and install Biosaline Agriculture And High Salinity Tolerance hence simple!

A major threat to agricultural productivity worldwide is undoubtedly due to environments with stressful factors including drought, salinity, waterlogging, extreme temperatures, non-optimal levels of mineral nutrients etc. Based on contributions presented at the International Conference on Biosaline Agriculture and High Salinity Tolerance in November 2006 in Gammarth, Tunisia, this book reviews the current state of knowledge in biosaline agriculture and high salinity tolerance in plants.

Biosaline agriculture is the production and growth of plants in saline rich groundwater and/or soil. In water scarce locations, salinity poses a serious threat to agriculture due to its toxicity to most plants. Abiotic stressors such as salinity, extreme temperatures, and drought make plant growth difficult in many climate regions.

The areas of low to moderate salinity levels can be restored by improving irrigation and crop management practices. However, in areas where increased salinity levels have restricted the growth of normal field crops, use of Biosaline Approach could be a potential solution. This approach is based on adaptable technology packages composed of salt-tolerant fodders and halophytes integrated with livestock and appropriate management systems.

[RAMSAP Project](#)

Biosalinity is the study and practice of using saline water for irrigating agricultural crops. Many arid and semi-arid areas actually do have sources of water, but the available water is usually brackish or saline. The water may be present in underground aquifers or as seawater along coastal deserts. With traditional farming practices, saline water results in soil salinization, rendering it unfit for raising most crop plants. Indeed, many arid and semi-arid areas were simply considered unsuitabl
