Testing involves the use of formal tests such as questionnaires or checklists. These are often described as "norm-referenced" tests.

## Understanding psychological testing and assessment

Psychological testing - Psychological testing - Test norms: Test norms consist of data that make it possible to determine the relative standing of an individual who has taken a test. By itself, a subject's raw score (e.g., the number of answers that agree with the scoring key) has little meaning.

## Psychological testing - Test norms | Britannica

The Myers-Briggs Type Indicator (MBTI) is an introspective self-report questionnaire indicating differing psychological preferences in how people perceive the world and make decisions. The test attempts to assign four categories: introversion or extraversion, sensing or intuition, thinking or feeling, judging or perceiving.

## Myers-Briggs Type Indicator - Wikipedia

psy·cho·log·i·cal tests. ( s?k?-loji-k?l tests) Measures designed to assess a person's achievements, intelligence, neuropsychological functions, skills, personality, or individual and occupational characteristics or potentialities. Medical Dictionary for the Dental Professions © Farlex 2012.

## Psychological tests | definition of psychological tests by ...

Definition. The thematic apperception test (TAT) is a projective personality test that was designed at Harvard in the 1930s by Christiana D. Morgan and Henry A. Murray. Along with the MMPI and the Rorschach, the TAT is one of the most widely used psychological tests. A projective test is one in which a person's patterns of thought, attitudes, observational capacity, and emotional responses are evaluated on the basis of responses to ambiguous test materials.
