Our relationship with money is one that lasts a lifetime, yet traditionally books on the subject tend to take one of two routes: a) how to get more, or b) how to deal with less. John Armstrong turns these approaches upside down, and looks not at money itself, but at how we relate to it and the meaning we attach to it. How does it drive us and frighten us? Can it change the world for the better? And how much do we actually need? Offering surprising and helpful new insights, this book will encourage you to redefine your feelings about money, and ultimately enable you to discover what is really important to you in life. One in the new series of books from The School of Life, launched May 2012: How to Stay Sane by Philippa Perry How to Find Fulfilling Work by Roman Krznaric How to Worry Less About Money by John Armstrong How to Change the World by John-Paul Flintoff How to Thrive in the Digital Age by Tom Chatfield How to Think More About Sex by Alain de Botton

This book brings together aspects of statistics and machine learning to provide a comprehensive

guide to evaluating, interpreting and understanding biometric data. It naturally leads to topics including data mining and prediction to be examined in detail. The book places an emphasis on the various performance measures available for biometric systems, what they mean, and when they should and should not be applied. The evaluation techniques are presented rigorously, however they are always accompanied by intuitive explanations. This is important for the increased acceptance of biometrics among non-technical decision makers, and ultimately the general public.

To say that complex data analyses are ubiquitous in the education and social sciences might be an understatement. Funding agencies and peer-review journals alike require that researchers use the most appropriate models and methods for explaining phenomena. Univariate and multivariate data structures often require the application of more rigorous methods than basic correlational or analysis of variance models. Additionally, though a vast set of resources may exist on how to run analysis, difficulties may be encountered when explicit direction is not provided as to how one should run a model and interpret results. The mission of this book is to expose the reader to advanced quantitative methods as it pertains to individual level analysis, multilevel analysis, item-level analysis, and covariance structure analysis. Each chapter is self-contained and follows a common format so that readers can run the analysis and correctly interpret the output for reporting.

We live in a society as dominated by food preference as by sexual preference, as obsessed with eating too much as with eating too little. In this accessible, cross-disciplinary text, David Goodman and Michael Redclift look at the development of the modern food system, integrating different bodies of knowledge and debate concerning food, agriculture, the environment and the household. They link changes in our diet and concern with the environment to many of the problems afflicting developing countries: food shortages, poor nutrition and wholesale environmental destruction.

This volume is aimed at those who are concerned about Chinese medicine - how it works, what its current state is and, most important, how to make full use of it. The audience therefore includes clinicians who want to serve their patients better and patients who are eager to supplement their own conventional treatment. The authors of the book belong to three different fields, modern medicine, Chinese medicine and pharmacology. They provide information from their areas of expertise and concern, attempting to make it comprehensive for users. The approach is macroscopic and philosophical; readers convinced of the philosophy are to seek specific assistance.

First published in 1964, Psychology and Social Problems looks at a changing society and research into problems of the time. Many of the themes in the book, such as delinquency, mental health and racial conflict, are still familiar and current topics of discussion today. Social scientists had carried out extensive research into problems of urgent public concern, yet their findings were not widely known or understood and they had often been diffident in advocating policies based on their conclusions. Michael Argyle discussed the recent psychological and social research bearing on the origins of aggression, delinquency, mental disorder, racial and international prejudice, and industrial discontent; he went on to consider the implications of these studies for prevention and control and for the guidance of social change. This sophisticated and well-documented critique is presented with such lucidity and verve that it will appeal equally to laymen and to students and professional workers and can now be enjoyed in its historical context.

In a series of entertaining essays, geoscientist Jelle Zeilinga de Boer describes how early settlers discovered and exploited Connecticut's natural resources. Their successes as well as failures form the very basis of the state's history: Chatham's gold played a role in the acquisition of its Charter, and Middletown's lead helped the colony gain its freedom during the Revolution. Fertile soils in the Central Valley fueled the state's development into an agricultural power house, and iron ores discovered in the western highlands helped trigger its manufacturing eminence. The Statue of Liberty, a quintessential symbol of America, rests on Connecticut's Stony Creek granite. Geology not only shaped the state's physical landscape, but also provided an economic base and played a cultural role by inspiring folklore, paintings, and poems. Illuminated by 50 illustrations and 12 color plates, Stories in Stone describes the marvel of Connecticut's geologic diversity and also recounts the impact of past climates, earthquakes, and meteorites on the lives of the people who made Connecticut their home.

For tens of thousands of Christians, Charles Haddon Spurgeon's "Morning and Evening "has been a daily devotional guide through life's ups and downs. But as time has passed, younger generations, nurtured on contemporary versions of the Bible and less familiar with Spurgeon's beautiful but sometimes difficult prose of the nineteenth century, have needed a devotional guide that made sense to them, written in their language, using the Scripture with which they are familiar. To that end, this new revised edition of "Morning and Evening" offers readers the best of the past" Spurgeon's insight and wise counsel" and the best of the present" the fresh, meaningful prose of the New International Version. Special Features: - Each day's devotions are presented on a two-page spread for complete ease of use. - Each of the 732 devotions" one for every morning and evening of the year" provides inspiring meditations on portions of Scripture drawn from every book of the Bible. - A new topical index helps readers discover Spurgeon's thoughts on various topics important to Christian life. - An index of texts lets readers find what Spurgeon had to say about a particular Bible verse. Spurgeon has penned meditations, expressed simply but eloquently, that continue to draw readers to faith and obedience. Though Spurgeon published thousands of sermons and many books, "Morning and Evening" remains by far his most popular work. This attractive, contemporary edition makes it easier than ever to enjoy it.

This book contains 20 papers from authors in the UK, USA, Germany and Austria. Historically, it gives examples of the influence of groundwater on battlefield tactics and fortress construction; describes how groundwater was developed for water supply and overcome as an obstacle to military engineering and cross-country vehicular movement by both sides in World Wars I and II; and culminates with examples of the application of hydrogeology to site boreholes in recent conflicts, notably in Afghanistan. Examples of current research described include hydrological model development; the impact of variations in soil moisture on explosive threat detection and cross-country vehicle mobility; contamination arising from defence sites and its remediation; privatization of water supplies; and the equitable allocation of resources derived from an international transboundary aquifer.

In a hard-hitting novel about fitting in—or not—Anthony "Ant" Jones gets transported from his East Cleveland hood to an almost all-white prep school and has to figure out where he belongs...before he loses himself entirely. Black Boy White School is a memorable debut that will appeal to fans of Walter Dean Myers and Sherman Alexie. Anthony has never been outside his rough neighborhood when he receives a scholarship to Belton Academy, an elite prep school in Maine. But at Belton things are far from perfect. Everyone calls him "Tony," assumes he's from Brooklyn, expects him to play basketball, and yet

acts shocked when he fights back. As Anthony tries to adapt to a world that will never fully accept him, he's in for a rude awakening: Home is becoming a place where he no longer belongs. In debut author Brian F. Walker's honest and dynamic novel about staying true to yourself, Anthony might find a way to survive at Belton, but what will it cost him?

In this book, Anthony G. Reddie creates a dynamic conversation between black theologies in the US and in the UK, comparing and highlighting divergences in the respective movements.

J. P. La Salle has developed in [20] a stability theory for systems of difference equations (see also [8]) which we introduce in the first chapter within the framework of metric spaces. The stability theory for such systems can also be found in [13] in a slightly modified form. We start with autonomous systems in the first section of chapter 1. After theoretical preparations we examine the localization of limit sets with the aid of Lyapunov Functions. Applying these Lyapunov Functions we can develop a stability theory for autonomous systems. If we linearize a non-linear system at a fixed point we are able to develop a stability theory for fixed points which makes use of the Frechet derivative at the fixed point. The next subsection deals with general linear systems for which we intro duce a new concept of stability and asymptotic stability that we adopt from [18]. Applications to various fields illustrate these results. We start with the classical predator-prey-model as being developed and investigated by Volterra which is based on a 2 x 2-system of first order differential equations for the densities of the prey and predator population, respectively. This model has also been investigated in [13] with respect to stability of its equilibrium via a Lyapunov function. Here we consider the discrete version of the model.

Here is a rhetorical treatment of Karl Barth s early theology. Although scholars have long noted the rhetorical power of Barth s work, calling it volcanic and explosive, this book uses rhetoric to illuminate the peculiar nature of his prose. It displays a Barth whose prose is radically unstable and inseparable from his theological arguments. The author connects Barth s early theology to the Expressionism of the Weimar Republic. He develops an original theory of figures of speech, relying on the philosophies of Paul Ricoeur and Hayden White, to delve more deeply into the particular configurations of Barth s writings. Nietzsche s hyperbole and Kierkegaard s irony are examined as rhetorical precedents of Barth s style. The closing chapter surveys Barth s later, realistic theology and then suggests ways in which his earlier tropes, especially the figures of excess and self-negation, can serve to enable theology to speak today.
