The field of Phytobacteriology is rapidly advancing and changing, because of recent advances in genomics and molecular plant pathology, but also due to the global spread of bacterial plant diseases and the emergence of new bacterial diseases. So, there is a need to integrate understanding of bacterial taxonomy, genomics, and basic plant pathology that reflects state-of-the-art knowledge about plant-disease mechanisms. This book describes seventy specific bacterial plant diseases and presents up-to-date classification of plant pathogenic bacteria. It would be of great help for scientists and researchers in conducting research on ongoing projects or formulation of new research projects. The book will also serve as a text book for advanced undergraduate and postgraduate students of disciplines of Phytobacteriology and Plant Pathology. Contains latest and updated information of plant pathogenic bacteria till December 2018 Describes seventy specific bacterial diseases Presents classification of the bacteria and associated nomenclature based on Bergey's Manual Systematic Bacteriology and International Journal of Systematic and Evolutionary Microbiology Discusses practical and thoroughly tested disease management strategies that would help in controlling enormous losses caused by these plant diseases Reviews role of Type I-VI secretion systems and peptide- or protein-containing toxins produced by bacterial plant pathogens Briefs about plants and plant products that act as carriers of human enteric bacterial pathogens, like emphasizing role of seed sprouts as a common vehicle in causing food-borne illness Dr B. S. Thind was ex-Professor-cum-Head, Department of Plant Pathology, Punjab Agricultural University Ludhiana, India. He has 34 years of experience in teaching, research, and transfer of technology. He has conducted research investigations on bacterial blight of rice, bacterial stalk rot of maize, bacterial blight of cowpea, bacterial leaf spot of green gram, bacterial leaf spot of chillies and bacterial soft rot of potatoes. He also acted as Principal Investigator of two ICAR-funded research schemes entitled, "Detection and control of phytopathogenic bacteria from cowpea and mungbean seeds from 1981 to 1986 and "Perpetuation, variability,

and control of *Xanthomonas oryzae* pv. *oryzae*, the causal agent of bacterial blight of rice" from 1989 to 1993, and also of a DST funded research scheme "Biological control of bacterial blight, sheath blight, sheath rot, and brown leaf spot of rice" from 1999 to 2002. He also authored a manual entitled, "Plant Bacteriology" and a text book entitled, "Phytopathogenic Prokaryotes and Plant Diseases" published by Scientific Publishers (India). He is Life member of Indian Phytopathological Society, Indian Society of Plant Pathologists, Indian Society of Mycology and Plant Pathology, and Indian Science Congress Association.

Excerpt from Manual of Pathology: Including Bacteriology, the Technic of Postmortems, and Methods of Pathologic Research In presenting to the profession and students of medicine the third edition of this work the author wishes gratefully to acknowledge the cordial reception that was accorded the last edition. Although over twice the size of the first edition, the second was exhausted in nearly the same length of time; it appeared late in the autumn of 1897 and was exhausted in the following year. The pressure of other duties rendered it impossible for the author to give the work the revision that seemed necessary, and therefore it has been out of print for nearly two years. During that time the author has occupied his spare moments in revising, rewriting, and rearranging the subject-matter. A number of the old illustrations have been replaced by new, and many original drawings have been added. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Manual of Pathology. Including Bacteriology, the Technic of Postmortems, and Methods of Pathological Research

Excerpt from Manual of Bacteriology and Pathology for Nurses This work is the result of several years experience in teaching the subjects of bacteriology and pathology to nurses. It was early discovered that there did not exist any work on these subjects which seemed adapted to the peculiar requirements of the busy nurse in training or in practice. The fact that such a work must of necessity be brief has been recognized, but a constant effort has been maintained to avoid sacrificing accuracy or lucidity for brevity. Considerable space has been devoted to the subjects of infection and immunity and to bacterial and serum therapy, because it was realized that the trained nurse, because of her intimate and continued association with them, is to become the great teacher of the masses in the newer developments in medicine and sanitation, as the physician can never be, and she should, therefore, keep abreast of the times on these subjects.
