Planning and designing research animal facilities (Book ...
Designing Research. In good scientific practice the design of an experiment is determined by what the scientist hopes to discover. While most biomedical research does not use animals, some questions about how a drug works or how the body functions, can only be answered by studying a whole-body system. The findings of any scientific research are only meaningful when the limitations of the methods are understood.

Designing Research | ari.info | ari.info
If a study is not designed to yield robust results and publications are not reported with enough detail, the animals and research resources used in that study are wasted. Appropriate experimental design and statistical analysis techniques are key means of minimising the use of animals in research. We have a number of resources to aid researchers to improve the design and reporting of research using animals.
