Of all the artifacts from the history of medicine, the Anatomical Venus--with its heady mixture of beauty, eroticism and death--is the most seductive. These life-sized dissectible wax women reclining on moth-eaten velvet cushions--with glass eyes, strings of pearls, and golden tiaras crowning their real human hair--were created in eighteenth-century Florence as the centerp.

But according to Joanna Ebenstein, author of *The Anatomical Venus: Wax, God, Death & the Ecstatic* (2016), this tension results from today's urge to draw clear, strict lines between science and art, reason and spirituality. "Science does not simply uncover truth, it is also a culturally constructed, normative activity that reflects the ideals of its time," writes Ebenstein.

The original Anatomical Venus is a life-size, dissectible female figure, meticulously sculpted from delicately pigmented wax by artist Clemente Susini for Florence's Natural History Museum. The Venus and her subsequent wax sisters were created with the aim of teaching anatomy to a popular audience.
